

Advanced Solutions for Medical Device Packaging

A one-stop source for **custom-designed packaging services and solutions** – with repeatability, compliance and marketability in mind...

CleanCut
Technologies, LLC.

Why CleanCut Technologies?

Fully Customized End-to-End Solutions

CleanCut Technologies has a packaging solution that's right for you!

We offer a complete custom product packaging portfolio designed to securely retain and protect your device.

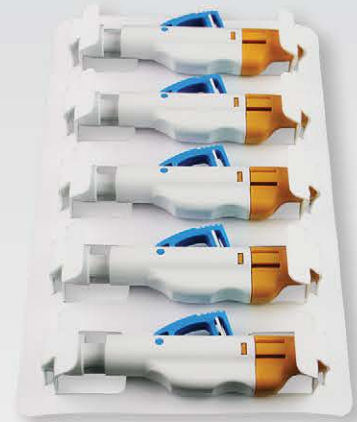

Clipless Guidewire & Catheter Dispensers

Our award-winning, patented, one-piece Clipless Dispenser is manufactured in various sizes and lengths to accommodate any guidewire or catheter. Optimized device retention during shipping, storage and use during surgical procedures – *without* clips. Backer card can be added for additional efficiency.

HDPE Pouch Cards

Custom die-cut HDPE pouch cards offer an attractive solution to properly position and secure medical devices and procedural components inside a sterile pouch. Ultra-thin, light weight pouch cards can be an economical alternative to thermoform trays or complement a generic tray with customizable, interchangeable pouch card inserts. Ideal material for prototype packaging as well as high volume production.

Pouches & Lids

We offer Tyvek® material, along with validated polymers and other materials for pouches that can be manufactured up to 18" wide x 80" long. Custom in-line pouch printing options available.

Cartons & Shippers

We design and offer precisely sized SBS shelf cartons and corrugated sterilization master cartons. Cartons are designed to reduce material footprint, can be printed with custom graphics, and range in size from 4" to 80" in length.

Value-Add Services from Concept to Manufacture

CleanCut Technologies supports the overall success of your medical device packaging with our comprehensive packaging services.

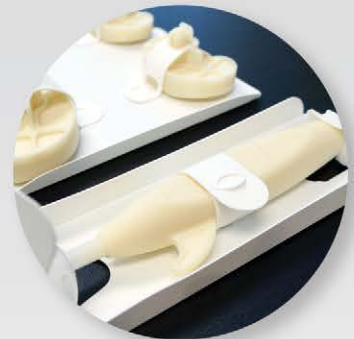

Design & Prototyping

With our diverse background in medical packaging design and manufacturing, you can trust CleanCut Technologies to produce an innovative and comprehensive packaging solution for your device. We keep cost, functionality, space, recyclability and safety in mind every step of the way.

3D Printing

Even if you are still in the early stages of product development, we can create an exceptionally accurate 3D printed prototype of your device, while providing concurrent development of your packaging at the earliest development phase possible. Additionally, we can create soft tooling to create high quality prototype parts.

Pad Printing

We can pad print your device or packaging to provide optimal marking permanence and clarity of company logos, IFUs, branding information, and more – even on difficult surface materials.

Contract Manufacturing

Need a little help? Our spacious 22,000 sq. ft. production area houses state-of-the-art ISO Class 7 and ISO Class 8 cleanroom space for any size contract manufacturing operations.
