**INNOVATIVE MEDICAL DEVICE PACKAGING DESIGN ELIMINATES
ADDITIONAL CATHETER & GUIDEWIRE PACKAGING ENTIRELY**

CleanCut Technologies' Dual Hoop Catheter DISK retains multiple catheters in just one convenient system

ANAHEIM, Calif. (March 28, 2017) -- Medical device manufacturers looking to eliminate additional catheter and guidewire packaging have recognized the Dual Hoop Catheter DISK, by CleanCut Technologies, as the ideal medical device packaging solution. The company's award-winning DISK, a clipless catheter and guidewire dispenser bonded to a HDPE backer card, has been enhanced further by adding a second clipless dispenser to the backer card to retain different size catheter wires. This entirely new packaging solution of distributing different size catheters in an all-in-one system reduces packaging material, and cost, while requiring less shelf space.

The Dual Hoop Catheter DISK was reviewed during HealthPack's annual "Voice of the Customer – Nurses & Technicians" panel held March 8, 2017 in Denver, Colorado. The panelists were impressed with the fact that the DISK retains multiple catheters and procedural components in one package and said "it is easy to remove the devices from the card". A few of the nurses and technicians demonstrated the "dumping" technique in which packages are opened and the contents are dropped into the sterile field, versus being handed to another professional. The DISK scored high marks in this area as well, as stated by one nurse "It is better that it doesn't jump off the table."

The Dual Hoop Catheter DISK meets the Packaging and Packaging Waste Directive (94/62/EC and 2004/12/EC) for limiting packaging weight and volume, while meeting green initiatives for the utilization of recyclable packaging materials.

Free samples of the Dual Hoop Catheter DISK may be obtained by contacting CleanCut Technologies at info@cleancuttek.com or calling 714-864-3500.
