**For Immediate Release**

**CleanCut Technologies New Easy Loading Fixture or “ELF”  
Allows Medical Device Manufacturers to Reduce Assembly Time and Increase Output**

**ANAHEIM, Calif.** (February 26, 2017) -- CleanCut Technologies has announced the launch of the company’s new time-saving fixture designed to reduce assembly time and increase output for medical device manufacturers. The Easy Loading Fixture or “ELF” is a custom-designed fixture that simultaneously releases retention elements on a backer card within seconds. Without the need for assembly teams to perform this manually, medical device manufacturers can expect their output to increase significantly.

The ELF is not only strong and durable, but exceptionally easy to use. Simply place the backer card in the ELF, close the lid and push the handles. The ELF is custom-designed to the exact specifications of your device, which allows the pins within the ELF fixture, to accurately push all retention elements in place.

Medical devices can be conveniently loaded on the backer card either inside, outside or on top of the ELF. The backer card is then easily removed with devices safely and securely in place.

For more information on the Easy Loading Fixture “ELF”, contact CleanCut Technologies at [info@cleancuttek.com](mailto:info@cleancuttek.com) or by calling 714-864-3500.
