**CLEANCUT TECHNOLOGIES' "DUAL HOOP CATHETER DISK"
HONORED WITH DOW'S GOLD AWARD FOR PACKAGING INNOVATION**

ANAHEIM, Calif. - September 13, 2018 -- CleanCut Technologies' Dual Hoop Catheter DISK continues to be on the cutting edge of medical device packaging design and was honored as a Gold Winner in Dow Chemical Company's "2018 30th Annual Award for Packaging Innovation". The award winners, announced on September 11, 2018, represent the packaging industry's top achievements in innovative packaging design, materials, technologies and processes.

The 15-member Judging Panel determined the Dual Hoop Catheter DISK, an all-in-one packaging system designed to dispense catheter wires and procedural components, exhibited excellence in technological advancement, responsible packaging and enhanced user experience.

"We are thrilled to be recognized with this prestigious award for packaging innovation. CleanCut Technologies prides itself on producing medical device packaging solutions that are innovative, cost-effective, and efficiently manufactured" said Brian Whalen, Director of Sales & Marketing. "For our team to be acknowledge by Dow, an industry leader in performance packaging, is a great honor and affirms our commitment to partner with our Medical Device customers to deliver best-in-class packaging solutions to the marketplace."

Because of the innovative design of the Dual Hoop Catheter DISK, catheter wires and procedural components are housed in one convenient system, eliminating the need to manufacture extra pouches, shelf cartons, and corrugated shipping boxes for each individual component. Packaging waste is reduced by 20-30% and significant cost and time savings are realized by medical device manufacturers.

While medical device manufacturers are impressed with the reduced packaging and cost savings, it is surgical teams that have truly recognized the convenience of using the Dual Hoop Catheter DISK. The need to open multiple sterile pouches and assemble individual components has been eliminated. This alone means less prep time, which may ultimately decrease a patient's time under anesthesia and enhance their safety and recovery.

The judges evaluated more than 200 entries from companies in 30 countries.

For free samples or more information on the Dual Hoop Catheter DISK, visit www.cleancuttek.com/dualhoopcatheterDISK or call 714-864-3500.
